The Invention of the Year

The world's lightest and most portable mobility device

Once in a lifetime, a product comes along that truly moves people. Introducing the future of battery-powered personal transportation . . . ***The Zinger.***

Available in Green, Black (shown) and Blue

Throughout the ages, there have been many important advances in mobility. Canes, walkers, rollators, and scooters were created to help people with mobility issues get around and retain their independence. Lately, however, there haven't been any new improvements to these existing products or developments in this field. Until now. Recently, an innovative design engineer who's developed one of the world's most popular products created a completely new breakthrough . . . a personal electric vehicle. It's called the ***Zinger***, and there is nothing out there quite like it.

"What my wife especially loves is it gives her back feelings of safety and independence which has given a real boost to her confidence and happiness! Thank You!"
–Kent C., California

The first thing you'll notice about the ***Zinger*** is its unique look. It doesn't look like a scooter. Its sleek, lightweight yet durable frame is made with aircraft grade aluminum. It weighs only 47.2 lbs but can handle a passenger that's up to 275 lbs! It features one-touch folding and unfolding – when folded it can be wheeled around like a suitcase and fits easily into a backseat or trunk. Then, there are the steering levers. They enable the ***Zinger*** to move forward, backward, turn on a dime and even pull right up to a table or desk. With its compact yet powerful motor it can go up to 6 miles an hour and its rechargeable battery can go up to 8 miles on a single charge. With its low center of gravity and inflatable tires it can handle rugged terrain and is virtually tip-proof. Think about it, you can take your ***Zinger*** almost anywhere, so you don't have to let mobility issues rule your life.

The Zinger folds to a mere 10 inches.

Why take our word for it. You can try the ***Zinger*** out for yourself with our exclusive home trial. Call now, and find out how you can try out a ***Zinger*** of your very own.

Joystick can be mounted on the right or left side for rider's comfort

Zinger Chair®

Call now and receive a utility basket absolutely FREE with your order.

Just Where Do We Start in This Game?

State quarters. (all images courtesy of the U.S. Mint)

COLLECTORS WHO HAVE BEEN ACTIVE for decades can tell you just how much fun our hobby can be. Whether it is the challenge of trying to find something rare or uncommon in change, or collecting coins as souvenirs from trips abroad, or trying to make a date run from coins that are in circulation, there are plenty of ways to collect, and a great deal to learn along the way. But what advice do we give to someone who is just starting out? Where are some good points of entry when it comes to collectible coin series? There are certainly a lot of possibilities, but we'll focus on just three. On purpose, we will look at one that is downright cheap, one that will cost more than pocket change, and one that might take some serious planning. Without further ado, here we go.

First, United States quarters

There is probably a legion of collectors who remember collecting Lincoln cents from change and pulling out some of the wheat-back cents. But those of us who remember doing that are dating ourselves. A newer generation of collectors are probably much more familiar with yanking quarters from change and trying to build a collection that way.

Start/Page 10

A Great Coin Sale

As I was growing up in Silver Spring, Maryland, I would frequent a local coin shop called Bonanza Coins which was used as an office by Julian Leidman, a top nationally known numismatist at the time. Often, I would observe him buying and selling rare coins and Peace Silver Dollars. I used to hang out in the shop for hours every day and loved watching the banter between the coin collectors and Julian – kind of like a bar, which my father was in simultaneously. I dreamed of one day starting my own coin company and selling coins to other dealers.

Today, that dream has come true, and my company is Gobrecht Numismatics. Now, let me get to the real story...

When I turned 16, I obtained my driver's license making it possible for me to drive an old car to local coin shows. This led me to a particular coin show in Gettysburg, Pennsylvania. One beautiful fall day, I drove up Route 15 from Silver Spring, Maryland to Gettysburg, Pennsylvania. I loved going to this specific show. The backdrop of the drive was picturesque mountains and beautiful foliage, and this area belonged to the rich history of the Civil War. At the time, I really did not know how to properly grade coins let alone sell them at shows. Most of the coins I sold were purchased from Bonanza Coins.

I arrived at the show and promptly entered with nervousness. I did not know what I was doing. However, I confidently made contact with the first dealer I saw and asked him if he wanted to view my small inventory of 150 coins. He said, "No." I approached a second dealer with the same inquiry, and he politely declined. The same occurred with a few other dealers. I was almost ready to go home, but I do not give up easily. I, then, asked a 30-something year old dealer named Stoner, and he agreed to view my collection.

He asked me if I had any nice Peace Dollars, and I showed him the 10 that I thought were nice. Back in those days, the price sheets only listed prices for MS-60 or MS-65 coins. The MS-60's were inexpensive while the 65's were quite the opposite. Mr. Stoner pulled out 10 Peace Dollars and asked me how much I wanted for them. Unsure of what to say and knowing I paid $300 for them, I figured any profit would be good. I asked him what he wanted to pay. He sternly said, "I will give you $7,000 cash."

I could NOT believe what I was hearing. I took a few seconds to think about his offer and said, "OK." I still was not even sure if he was being serious, but he took out $7,000 in cash, laid it on the table, and paid me. I said, "Thank you, Mr. Stoner," and accepted the money. Then, I left the show to enjoy my magnificent drive home, smiling the entire time, and daydreaming about the two new cars I could now buy. I thought to myself, "How could I not be a coin dealer with opportunities like this?"

I am still uncertain as to whether Stoner was the gentleman's real name or an appropriate nickname? Regardless, I will never forget him.

Terms: 1) **LAYAWAY IS AVAILABLE.** Please call for terms. 2) Coins must be shipped to the credit card's billing address 3) Shipping and Handling is $10 (may be more for weight or value) 4) All coins are guaranteed genuine. 5) Coins graded by in-house standards (we do not use numerical grading). 6) 7 days return privilege for all items in original holder. 7) Gobrecht Numismatics is a strong buyer of coin collections.

LIFE MEMBER NGC PCGS AUTHORIZED DEALER

Even as this is being read, the U.S. government is printing trillions of dollars in paper money. This will cause the price of Gold and Silver to rise drastically – a pattern leaving us anticipating coins to continue to rise in value even though their extreme shortage persists due to the COVID-19 shutdown.

Later this year, the U.S. government is changing the design of the American Silver Eagle, which will leave collectors searching high and low for the scarce 2021 American Silver Eagle with the early year design (Type I). The year 2021 will, also, host a newly designed 2021 Peace Dollar as an homage to this Silver Dollar's 100th anniversary.

Interest-Free Layaway for 12 Months... a Preferred Customer Advantage

GOBRECHT COIN BANKER

We realize that many of our clients collect coins for investment purposes. Smart! We also realize that sometimes you may not have access to available funds to complete your order. Tht's why we offer interest-free terms for orders over $1,000*. Call today to discuss your options! *This offer does not include bullion orders. **GOBRECHT NUMISMATICS 1-800-322-0098**

THREE EASY PAYMENTS

Need a little extra time to pay for your order? No Problem! We offer a 90-day, interest-free plan at no extra cost. *This offer does not include bullion orders. **GOBRECHT NUMISMATICS 1-800-322-0098.**

LAYAWAY

Working with a budget that has the coin of your dreams out of reach? Not to Worry! For just 20% down you can make a deal! *Maximum order cannot exceed $50,000 and does not apply to bullion orders. **GOBRECHT = MONEY IN THE BANK!!**

HOW CAN WE HELP?

Whether you want to place an order, discuss our interest-free buying options, or have questions about the best way to grow and diversify your coin portfolio, we have knowledgeable Customer Service Representatives as well as our in-house Numismatists standing by to assist you. **Call today with your want list!**

Start/from Page 6

The buy-in to sit at this table, as it were, is only twenty-five cents since we are just plucking pieces from pocket change and everyday transactions. Importantly, this kind of collecting by searching gives us the opportunity to get our hands on every single twenty-five cent piece that has been issued since Caesar Rodney rode across the reverse of the Delaware quarter back in 1999. The P-marked coins as well as the D-marked coins are all available, although we might have to do some heavy duty searching to assemble a full set.

Anyone gleaning quarters from circulation will quickly find out that the ever-changing reverses are not the only set of quarters that will turn up. Plenty of older pieces, going all the way back to 1965, are still circulating, doing what they were designed for decades ago. It won't cost any more than twenty-five cents to get our hands on a Bicentennial reverse quarter, for example – the P or the D mint marked – or any of the P and D quarters that pre-date the States Reverse program.

[United States silver eagle one-ounce bullion coins]

These big, silver discs are never going to cost as little as pocket change. They are pegged to the price of silver on the world markets, which mean they will cost about $30 - $35 today. That's a bit higher than the cost of the metal itself, but the dealers do have to make a bit of a profit. To quote some long-forgotten, hard-working salesman, "If it's not a deli, you can't eat what you don't sell." If you are in the business, silver bullion coins need to sell. That being said, assembling a date run of the regular silver Eagles that goes all the way back to the beginning in the 1980's ought to be both fun and a neat hunting expedition.

A one ounce silver eagle.

The challenge with these older pieces is finding them still in excellent condition. Some of them have, after all, been circulating for more than fifty years and are showing their age.

We will also mention that a person could expand a quarters collection by adding proof examples to their holdings. Proof quarters will always be more expensive than anything we can pull from change. But they don't come connected to sky-high price tags, since the Mint has been pounding out several million proof sets each year since 1968.

Second, the United States silver eagle one-ounce bullion coins

Okay, we're going to take a big jump up here and suggest that a neat collection to build is the United States one-ounce silver Eagles. These silver bullion coins first came out of the main Mint in Philadelphia back in 1986 and have been produced at the Mint at West Point since 2000. There have been proofs produced each year of the program, but let's start with what can be called the regular issues.

As far as the just mentioned "jump," we're referring to prices. These big, silver discs are never going to cost as little as pocket change. They are pegged to the price of silver on the world markets, which mean they will cost about $30 - $35 today. That's a bit higher than the cost of the metal itself, but the dealers do have to make a bit of a profit. To quote some long-forgotten, hard-working salesman, "If it's not a deli, you can't eat what you don't sell." If you are in the business, silver bullion coins need to sell. That being said, assembling a date run of the regular silver Eagles that goes all the way back to the beginning in the 1980's ought to be both fun and a neat hunting expedition. And as time passes the cost will probably be no real problem. Silver does tend to rise in value.

Now, there are a couple of other options when it comes to collecting one-ounce silver Eagles. The first is looking at the proofs. The United States Mint, and indeed all the world Mints, realize the collector community has an affinity for proof coins, and has met that with some amazing offerings in the past few decades. Proof silver Eagles are one of those offerings.

BUYING WALKING LIBERTY HALF DOLLARS

A 1/10-ounce gold eagle.

They are not connected to the price of silver, since that proof designation means they are the best of the best when it comes to coin production. The premium we pay for proofs is something that can ultimately make for an eye-popping collection – and quite a few of the proofs are available for as little as $75 per coin. Some collectors may think any proof isn't worth the extra expense, while others may have no problems in this area.

Beyond regular issue one-ounce silver Eagles and their proof siblings, there are also a few years in which we might opt for reverse proof, burnished uncirculated, or enhanced pieces. For the collector who has chosen to stick with regular issues, these somewhat fancier options may seem ridiculous, something cooked up just to separate painlessly a collector from his or her money. For the person who truly enjoys the proofs though, these further possibilities may be just what they want to expand and fill out their collection. Once again, each of these will come with some premium, meaning they cost more than just the value of precious metal in them. But also once again, the price tags are not through the roof.

Third, the 1/10-ounce United States gold Eagle bullion coins

If the silver Eagles represent one jump up, well, this third series will seem like a real blast off from the launch pad – but it one worth considering. It's fair to say that just about everyone likes gold. Collections of gold coins tend to be considered the biggest and best slice of the pie, we might say. Yet many of us also consider gold too costly for us. Assuming that's the case, let's look at an oft-forgotten United States coin, the gold, 1/10-ounce Eagle.

All the way back in 1986, the Mint came out with not one but four gold bullion coins. The big, one-ounce gold Eagles tend to get most of the limelight, but there are also 1/2-ounce pieces, as well as 1/4-ounce pieces, and the small, 1/10-ounce piece we are going to consider. As we get started, let's do some math. It will help us determine whether or not buying these will be to our tastes.

Okay, assuming the price of gold is $1,800 per ounce, the cost of one of these "long rounds," the one-ounce pieces, will probably be that plus ten percent, or $1,980. That leads us to believe that the cost of one of the "short rounds" we are looking at will be $198 – one-tenth of the big coin. The reality of it is that one of the 1/10-ounce pieces will probably cost about $220. For whatever reason, there is almost always a bit more of a premium connected to the small gold coins. This is true of most small denomination gold coins from any country, not just the U.S. 1/10-ounce gold Eagles.

Knowing the price tags though should not deter us from getting serious about getting our hands on some gold. If anything, it's a reason to save up. These small Eagles go all the way back to 1986, and the price for the older ones is not all that much higher than that of the most modern.

The 1/10–ounce gold Eagles are also available as proofs, just like the silver Eagles were. A bit of good news related to this is that the cost of any of the proofs is not all that much higher than that for the regular pieces. The reasons for this are a bit nebulous but may have to do with the fact that regular or proof, most of these gold Eagles do not change hands all that much, and thus look sharp no matter the style of their minting or how old they are. Like we said, that's some good news, should we choose to dive into this series of small but attractive gold coins.

More?

There are certainly more series that a person might delve into when starting out in this wonderful hobby. But we have seen here that coin collecting can be as low cost as pulling coins from our pocket change, or as upscale as collecting gold – and is filled with possibilities in between. Whatever you choose, good luck!

Basics and Beyond

Review of the 2022 Red Book

In "CoinTalk," an online question-and-answer forum, new collectors with questions are typically advised to buy the latest *Red Book (A Guide Book of United States Coins)* for answers to their queries. This is sound advice to which I would add, "and read it." That is, if you just buy the book to look up how much your coins are worth, you're missing out on a lot of useful information.

In an earlier column, I wrote about trades that were decidedly in my favor that I made in the late 1950s with a bookstore's owners. The reason for this was that the owners didn't realize that problem coins weren't worth full *Red Book* values. If they had read the second page of my and presumably their 1958 *Red Book*, they would have found the following: "IMPORTANT: Coins in any condition with defects, such as those which are bent, corroded, scratched, holed, nicked, stained, oxidized, mutilated, or have other imperfections are worth less than if free of these defects."

In this column, I'm going to tell you about the 2022 *Red Book* and what it offers in comparison with my 1958 edition. One thing that's immediately evident is that the new one has more pages. Of course, this is to be expected because of all the new coins the U.S. has issued in the last 64 years. From 254 pages in 1958, the contents now occupy 460 pages.

But there's much more to the contents than all the new coins. For one thing, the coins in my 1958 edition were valued in fewer grades than in the 2022 edition. Early Lincoln cents, for example, were consigned to just three grades, Good, Fine, and Unc[irculated]. After 1933, the only grades listed for most dates was Unc. About Uncirculated had not yet become an accepted grade. By contrast, in the current *Red Book*, Lincoln cents through 1942 can be assigned any of eight different grades.

Pictures in the earlier book were sparse and all in black-and-white in contrast to today's full-color photographs. Another thing that I view as a vast improvement is that the mintages are given with a coin's listing rather than in a separate table at the end of the book as in the earlier version.

But the reason new collectors are advised to obtain a recent *Red Book* is that it is much more than just a listing of coin dates and values in several grades. There is a wealth of information throughout the book that will begin to transform the novice collector into a numismatist.

At the beginning, there's a brief section on how to use the book. This mainly focuses on one of the most important things that a budding numismatist should learn, which is how to grade coins, how to describe a coin's condition. Major coin grades are listed and a brief statement characterizing each grade is appended.

Unfortunately, in this listing of major grades, one of the most important grades was omitted: Very Choice About Uncirculated, or AU58. A coin receiving this grade has only a touch of wear on the highest points of the design but may have minimal distractions otherwise. It's a coin that might merit a grade of MS63 or higher without the evidence of wear. The beauty for the wise collector is that the AU58 coin is typically priced well below a coin meriting only a low mint-state grade, such as MS60, '61 or '62.

The brief section on the grading scale is followed by a page devoted to third-party grading and authentication. This is a crucial discussion that deserves to be boldfaced because of its importance. A critical admonition appears near the end: "Buy the coin, not the slab." In other words, just because a grading service, even a major one, says a coin has a particular grade, if you think it's ugly, don't buy

it.

Next, there's a section on money in America, which encapsulates the story of what was used before the creation of the United States Mint. What will be even more important to most collectors are the regular Mint issues, coins struck by the U.S. Mint in 1793 and beyond. The history ends with a listing of Mints and mintmarks. Here, the new collector can easily see when the various mints came online, when they ended (if they did), what specific coins were minted, and so on.

For most readers, a section entitled "Checking Your Coins for Authenticity" may be best summarized by a single comment: If in doubt, get it authenticated or buy only coins certified by the major services (PCGS, NGC, ANACS).

Each major coin series begins with a brief description of the type, who designed it, years of issuance, metallic composition, and so on. Variety changes within a series are occasioned by another blurb. For example, in the Indian Head cent series, the bronze cent began in 1864. Toward the end of the year, the designer's initial, L for Longacre, was added in an inconspicuous spot on the obverse.

The "with L" variety of the 1864 cent is significantly more valuable than the cent without it. I once bought an 1864 cent from a dealer in England who priced it as the more common variety. A reading of the *Red Book* would have alerted him to the difference.

Interesting and often valuable coin varieties are illustrated with photographic enlargements of key features. For example, in Jefferson nickels, such enlargements illustrate the 1942, D Over Horizontal D variety; the 1949-D, D Over S variety; the 1954-S, S Over D variety, and several others.

Examination of these enlargements will help the new collector determine if the coin he's found is a valuable variety or just a common example without the key features. One example that often crops up in "CoinTalk" is the 1969-S doubled die Lincoln cent. New collectors think they've found the real thing and ask about their coin in the forum, sending pictures that clearly don't match the Red Book enlargement. They're often advised to buy a new *Red Book*.

Toward the end of its 460 pages, the *Red Book* introduces a variety of coin and coin-like collectibles. Hard Times Tokens, for example, are described and illustrated with a smattering of representative examples. This is also done for Civil War Tokens and for types of error coins, with a pricing guide for major errors.

There's even a pricing guide for collectors of *Red Books*. With this guide, I was able to determine that my 1958 *Red Boo*k is worth $8 in Fine condition. Actually, I don't think that my well-used book is anywhere close to Fine condition, but it was useful in writing this review.

The *Red Book* purports to be a retail pricing guide. A companion to the *Red Boo*k, the Blue Book (Handbook of United States Coins), is a wholesale pricing guide, or an indication of what an interested dealer might offer for your coins.

The *Red Book* is published by Whitman Publishing, LLC, and can be found both online and in many Big Box stores. The list price of my spiral bound edition is a modest $15.95.

STANDING LIBERTY QUARTERS

1916-1930

The first Standing Liberty quarter dollars were struck in late 1916.
(Image courtesy of Heritage Auctions www.ha.com)

By R.W. Julian

TO SOME MODERN COLLECTORS the Standing Liberty quarter dollar of 1916 through 1930 is generally known for only one thing, the 'indecent' design that was used in 1916 and 1917. This controversy has been around for some years, obscuring the fact that the true history of this interesting coin is to be found in the politics of the time and especially World War I.

Woodrow Wilson was elected president in 1912 and took office in March 1913. He had been in office little more than a year when World War I erupted in August 1914. The United States was officially neutral but tended to side with the Allies against the Imperial German Government.

President Woodrow Wilson

As time progressed the Germans felt increasingly threatened; they then turned to open submarine warfare against the neutral shipping that was keeping England and France in the war. American ships were sunk on the high seas and the ill-fated Zimmermann telegram of 1916, in which the Kaiser, William II, offered part of the U.S. to Mexico, caused an enormous uproar when it was stolen and made public.

In early 1916 the election battle started in earnest, with the President defending his policies of non-intervention. The slogan "He kept us out of war" was heard with more and more frequency. His opponent in the fall election, Charles Evans Hughes, was a gifted orator who made strong inroads into the President's popularity but lost the November election by a narrow margin.

Against this background the decision was made in late 1915 to create new artwork for the minor silver coins. Knowing the political battles in store during the coming year, the White House almost certainly became involved in the redesign process. No Congressional authorization was necessary because the Barber silver coins then being struck fell under the 25-year rule in 1916, meaning that the Treasury could create the new artwork without outside interference.

Hermon A. MacNeil

Mint Director Robert W. Wooley wrote several artists in December 1915 that the government was planning to change the designs of the dime, quarter, and half dollar. Hermon A. MacNeil received one of these letters as did noted artist Adolph Weinman. The point of hand-picking the artists was to carefully control the kind of artwork that would appear on the coins; there was a secondary motive in that these particular artists were well known for the quality of their work.

MacNeil, born in 1866 in Prattville, Massachusetts, was then 49 years of age and at the peak of his artistic career. He had studied in Paris in the 1880s and

then worked in Chicago during the early 1890s. From 1896 to 1900 he studied under Italian masters in Rome; upon his return to America, he established a studio on Long Island, where he spent the rest of his life, dying at the age of 81 in October 1947.

The terms of the contest, as worked out by the Bureau of the Mint in consultation with the Treasury, were that each artist would receive $300 for an entry and $2000 if the design was chosen and used for the regular coinage. The first stage was for the artists to submit sketches for consideration.

There has long been a view that artists were free to choose their own designs for the coinage without so much as a hint from the Treasury or Mint Bureau. Nothing could be further from the truth. It is clear that in all cases the artist was given some latitude, but the overall direction of the artwork was carefully spelled out. It is equally clear that the President was closely involved in the choice of motifs.

Although not generally realized, the President had easier access to the choices being made than otherwise would have been the case. Treasury Secretary William G. McAdoo was married to Wilson's daughter Ellen and was thus the son-in-law of the President.

Treasury Secretary Wiliam G. McAdoo

It seems likely that Mint Director Wooley instructed MacNeil that one of the obverses was to have Liberty coming through a doorway, symbolizing national defense while the other two suggested designs were, of course, similar to the finished Weinman work on the 1916 dime and half dollar. On the basis of the drawings he submitted in early February 1916, MacNeil was given the commission for the obverse of the quarter dollar.

MacNeil then began work on the reverse, which was less complicated in that an eagle had to appear, as required by law for the quarter and half dollar. The exact form of the eagle was probably more or less left to the discretion of the artists. Within a short time after submitting his newest sketch, MacNeil was notified that it had been accepted.

The next step for the artist was to execute the plaster models, a difficult piece of work considering that MacNeil had not created any of these for coinage dies in the past. He spent time at the Mint carefully studying the necessary techniques. The requirements for coinage plasters are strict as, for example, the distance between the low and high points of the design is very slight.

MacNeil was able to complete his plaster models in early June 1916, only a few weeks after the sketches had been approved. The first obverse had two dolphins at the lower edge while the motto IN GOD WE TRUST was on a ribbon stretching from Liberty's right hand to the shield.

The first obverse prepared by MacNeil has a topless Liberty, with her right breast exposed. There seems to have been no internal official comment on this aspect but the dolphins and the motto proved otherwise, the Treasury (i.e. the President) ordered changes. The dolphins had to be removed and the motto placed on both sides of Liberty. The revised obverse model is believed to have been completed by late August 1916, but then a new problem arose.

Chief Engraver Charles E. Barber did not like the rough surfaces of the models and asked that they be smoothed down. MacNeil and Weinman argued against this suggestion but in the end, Barber won out, or at least mostly so, as rough areas were kept in only a part of the quarter dollar obverse.

Chief Engraver Charles E. Barber

At this point in time the exact sequence of events is uncertain. However, it is known that Barber, perhaps with the help of assistant engraver George T. Morgan, made changes to the MacNeil plasters, possibly in part without the artist's permission or knowledge. Not long afterwards, dies were made and lead strikes were prepared for official examination.

These lead patterns were carefully gone over by the President and other key Administration officials. It was not likely that coinage would begin before the election but then no one wanted word leaking out that the new designs were not appropriate either.

There was one final hurdle to overcome before coinage of the quarter dollar could begin. MacNeil asked that his initials appear on the obverse as had become more or less standard for U.S. coinage since James B. Longacre began signing his work in the late 1840s. The silver coins being replaced carried, for example, the initial B for Charles Barber. In due course permission was granted and MacNeil's initials are to be found to the right of the date.

Coinage of the quarter dollar, the last of the three new coins to be approved, began in the last days of December 1916. With this short time left, only 52,000 pieces were made at the Philadelphia Mint, creating an almost instant rarity for future collectors. None of the new design was struck at either the San Francisco or Denver Mints in 1916.

Mint Director Raymond Baker, in his report for fiscal 1917, reported that the new quarter "is intended to typify in a measure the awakening interest of the country to its own protection." He further noted that Liberty is "stepping forward to the gateway of the country . . . The left arm of the figure of Liberty is upraised, bearing the shield in the attitude of protection, from which the covering is being drawn."

The first quarters have been the subject of intense scrutiny, no more so than at the present time. The most important point to collectors, when considering high-grade specimens, is whether or not Liberty has a full head – in other words if the details on the side of the head are present or not. Only a small proportion of uncirculated specimens have a full head and for some dates this aspect is virtually unknown.

As the most difficult date in the series, the 1916 brings strong prices

whenever offered. In F–12 the book value, according to the price guide in *Coins Magazine,* is $4,800. For most coins a Fine grade is not all that desirable but for the Standing Liberty quarters dated before 1925 the dates wore off rather quickly and here it is basically the date that determines the grade, not the rest of the coin.

A handful of the 1916 coins had been sent to MacNeil in advance of the official release on Jan. 17 and he was not exactly pleased with what he saw. He protested some of the changes, but it was of course too late to do anything about coins already struck. Mint officials did keep his views in mind, however.

In the 1960s, and perhaps earlier, it was fashionable among numismatic writers to report that a great hue and cry had arisen in early 1917 over the topless Liberty and that this had forced the government to change the design. Even Anthony Comstock was said to have strongly protested the new quarters; the latter act would have been a neat trick, considering that he had died in 1915. No one, including the present writer, has been able to find a report of any kind of public protest in 1917.

The design was changed in 1917, however, but it is far more likely that the idea came from a different source. Treasury Secretary McAdoo had strong political ambitions and was planning to run for the presidency in 1920; even in 1917 he was calling in the necessary political IOUs. As he was the person legally responsible for approving the new quarter, McAdoo and his political advisors no doubt felt that an advance damage control would take care of any protests that might otherwise arise during an election year.

What happened next is not quite clear, but it seems probable that MacNeil had private conferences with high Treasury and Mint Bureau officials in late February or early March 1917. MacNeil was probably now told that Chief Engraver Barber's changes were being reconsidered; Barber, who did most of the alterations, had conveniently died on February 18, 1917.

It was quickly realized that Congressional approval would now be required because a serious change fell under the 25-year rule that had been enacted in 1890. To this end McAdoo chose a close friend, Congressman William Ashbrook of Ohio, to spearhead the measure through the national legislature.

1918/7-S overdate. (Image courtesy of Heritage Auctions www.ha.com)

In 1917 the design was changed. (Image courtesy of Stack's/Bowers)

The resulting July 1917 law allowed the Mint to change the position of the reverse stars and the eagle as well as the lettering and concavity of the fields. The "concavity" point was supposedly in response to a complaint that the coins would not stack; doubt has been cast on this latter claim, however, and it may have been mere window-dressing for the real reasons.

Exactly who did the new artwork is unclear but Chief Engraver George Morgan probably did the bulk of the changes; no doubt MacNeil was involved but only to a minor degree. The latter was necessary as otherwise MacNeil might have had second thoughts, just about the time of the next presidential election. The revised obverse now has Liberty wearing a chainmail vest, thus changing the design.

There has been considerable discussion over the past several decades among numismatists as to whether the obverse changes were permitted by the July 1917 statute. That law did specify that the devices were to conform to the artist's drawings of May 1916, which may have given McAdoo the necessary loophole. No doubt the original drawings had by then been conveniently mislaid.

The identity of MacNeil's model has always been an interesting question. By the spring of 1917 the name of Doris Doscher, later an actress, had appeared in the numismatic press but in 1972, after Doscher died, Irene MacDowell made a similar claim. It is quite possible that both women were telling the truth and that more than one model was used.

The 1927-S is the scarcest of the later dates for this series. (Image courtesy of Heritage Auctions www.ha.com)

Coins of 1917 in the old design are easily obtained for reasonable sums as many of these were saved by the public as a first year of issue. The later 1917 coins, however, are worth more as less of these were put aside by the general public.

The famous 1918/7–S overdate quarter has long been known as a rarity and modern-day prices well reflect this. In XF–40, for example, the book value is $8,000.

Several of the mintmarked coins of the late 1910s and early 1920s are very scarce, with the 1923–S being the most difficult to obtain. These coins would have been more common except for the date wearing off within a few years of daily use. In late 1924 the Mint finally took notice of the problem and Chief Engraver Morgan executed a new obverse hub in which the date was more recessed than in the past. It solved the problem and Standing Liberty quarters of the years 1925–1930 could still be found by collectors in the late 1950s.

The only scarce date after 1925 is the 1927–S but even that date could occasionally be found in circulation after 1950. High-grade specimens of this issue do bring strong prices, however.

There was no quarter dollar coinage in 1931 but in 1932 Congress approved a change of design, by honoring George Washington. The fine Standing Liberty design was no more and today only collectors are left to appreciate what once was.

In 1925 the date was changed so that it would not wear down as quickly.
(Image courtesy of Heritage Auctions www.ha.com)

The Liberty Standing quarter dollar was last struck in 1930.

Latest and Greatest Finds in Pocket Change

I found a 1955 doubled die cent in my mother's mahjong change when I was 13 years old in 1963. Little did I know that tiny little cent would launch a hobby, a career and a long life pursuit of rare die varieties from the U.S. and the world.

Now, at 71 years old, I still enjoy researching, collecting and publishing on many aspects of the hobby. And, I've made friends with many interesting and incredible people along the way. Collecting coins is both fun and rewarding.

Michael S. Fey, Ph.D.
Former ANA Governor
Summer Seminar Instructor
Co-author of Top 100 Morgan Dollars

Found an 1838 half dollar in a roll of half dollars! What a surprise.

Cliff Levesque
Address withheld

The most interesting coin I've gotten in my change would have to be at the drive thru at McDonald's in my town, Havana, Ill. A 1905 Indian cent. It's beat-up some but is still legible. A 117-year-old coin in my change for a McChicken is pretty amazing in my opinion!

Earl C. Bridges
Havana, Ill.

Not in change, but in a 2009 proof set where I found a severely clash died Jefferson nickel. It is filled with many clashes, but the best is that both of Jefferson's eyes are visible on the reverse in the field below Monticello and also in the word "Monticello." There are many more, too numerous to mention. I had it certified by the ANACS.

John Dunkle
Essington, Pa.

I found in my pocket change a 1967 Jefferson nickel, no mintmark . What I noticed is it has a very crisp look to the profile, really stands out a little more, especially for the year. I took a closer look at it and in the word, "Liberty," where the "I" is, there's an upside-down "L," so it looks like "L7BERTY. Except for the slanted down stroke, it's perfectly straight, just like an upside-down "L." I received it in change a few months age from the Chevron gas station a few blocks away. Damnedest thing I ever seen. It doesn't appear to be tampered with at all; the letters are pretty crisp. Sadly, there are no steps and a little damage to the rim. I would really love to get this graded properly, but I don't have the money right now. As of right now, I have about a 350-piece collection, all denominations and all in MS-65s and higher condition. So to choose which one to send to grade would be very difficult for me.

Jeff Graves
Address withheld

I found a 1976 Bicentennial quarter in MS-65 condition with a drummer boy's not fully formed drum on the reverse.

Steve Cheaney
Northville, Mich.

The most unusual coin I found lately was a 1926 Lincoln cent that was fine on the heads side, but the reverse side was a blank. I'm going to have it checked out when I get a little time. I have looked in coin books and online but could not find any information about any other coin found with those characteristics.

Ron Clark
Loveland, Colo.

My most exciting find was at the end of December when I got a 1905 Barber dime from the automatic change dispenser at the gas station. Who woulda thunk!

Fritz Clemens
Twinsburg, Ohio

I myself have not found anything of interest in my change; however, allow me to share a story of one of my customers. She had been given a $2.50 gold Liberty in her change. She thought it was just a modern dollar. She went to 7-11 to purchase a cup of coffee, and they would not accept her coin. So she went to McDonald's and offered up her coin for a cup of coffee. "No" was the reply. She then came over to my store and stated, "All I want is a cup of coffee." I gladly offered her all the coffee she could drink for free, along with $250. She left with two cups and a pocket full of cash. Keep searching, you just never know.

20th Century Type Coins for the New Collector PART 1

By Mike Thorne, Ph.D.

AS I'VE NOTED BEFORE in these pages, one of my favorite online numismatic sites is CoinTalk, which you can access by going to cointalk.com. There, new collectors often begin their exposure to a forum by posting a coin they've found roll searching for error coins. They're almost always sure that what they've found is going to make them rich.

About 99 percent of the time what the new collector thinks is a doubled die cent or one with a second mintmark over the original one or something even more esoteric is actually a coin with post-minting damage, which is worth only face value. At this point, the novice is told to buy a *Red Book (Guide Book of United States Coins)* and study it.

I agree with this advice, and you'll find my review of the 2022 Red Book elsewhere in this magazine. If you're new to coin collecting, I have a suggestion for your actions following the Red Book purchase: Use your new book to help you assemble a 20th century type set through the dollar denomination. If you can afford it, continue this exercise with gold issues. I'll have more to say about a 20th century gold type set next time.

A type set is a collection of one of each design type within a denomination. For example, for the 20th century U.S. cent issues, your set would consist of an Indian Head cent, a Lincoln cent with the designer's initials on the reverse, a Lincoln wheat cent with no designer's initials, a Lincoln wheat cent with the initials at the bottom of Lincoln's bust, a Lincoln Memorial cent, and so on.

By working on a 20th century type collection, you will get a good idea of what's out there to collect. You might find after completing this exercise that there are a few of the different design types that you like much better than the others. If this is the case, then you can

1909 Indian Head cent. (Image courtesy of Heritage Auctions www.ha.com)

1912 Liberty Head nickel. (Image courtesy of Heritage Auctions www.ha.com)

1917 Lincoln cent, no Designer's Initials. (Image courtesy of Heritage Auctions www.ha.com)

begin to work to assemble a set of the different dates of your favorite design. One advantage of this specialization is that you can concentrate your efforts and funds on coins you really like, and you won't be tempted to fritter away your money on coins that really don't interest you.

With this in mind, let's take a look at the coins you might want for your 20th century type collection. Although most people select the least expensive example of each design type for a type collection, I will suggest some less common examples that are perhaps more interesting. I'll cover 20th century types from cents through quarters in this article, with halves, dollars, and gold types next time.

1. Indian Head cent. With a design by James B. Longacre, you can choose any of the dates between 1901 (the first year of the 20th century) and 1909. Using the value guide in this magazine, most of the Philadelphia issues between 1901 and 1909 are worth between $1.35 in G4 and $90 in MS63. The date with the lowest mintage that still fits this pattern is the 1908, so if you want a slightly scarcer example, 1908 would be a good choice. If you don't want to spend $90 on your Indian cent, an example in XF40 at $12 will have a lot of detail for a little money.

If you can afford to spend a bit more on your design types, the 1908-S is a winner. With a mintage of slightly more than a million, the 1908-S has the distinction of being the first cent produced at a branch mint. Again, the XF40 grade offers a lot of detail for a somewhat reasonable amount ($225). If that sounds too steep, a 1908-S in F12 should cost around $150.

2. 1909 Lincoln Cent, Designer's Initials on the Reverse. The Lincoln cent was designed by Victor D. Brenner, and his initials appear on the bottom of the reverse on only two coins: 1909(P) and 1909-S. For type purposes, the 1909 VDB is the reasonable choice, as the 1909-S VDB is the big key to the series and priced accordingly. Values for the 1909 VDB range between $9 in G4 and $110 in MS65. A nice XF should cost around $14

3. Lincoln Cent, no Designer's Initials. Between 1910 and 1917, the designer's initials were omitted entirely from the Lincoln cent. They were reinstated in 1918 and located at the bottom of Lincoln's shoulder next to the rim, where they have remained.

Once again, the P-Mint coins are going to be the least expensive. For example, the 1910 is just a $35 coin in MS63. Alternatively, any of the D or S mint coins would be an interesting addition to your type set. As just one example, the 1914-S, with a mintage of 4,137,000, lists for about $80 in XF40.

4. Lincoln Cent, Wheat Ears Reverse, Designer's Initials on Shoulder. Except for the steel cents in 1943, any cent from 1918 through 1958 will do for this type. The dates become less expensive the closer you get to 1958. One interesting example is the 1955-S, which has a relatively low mintage. It was thought at the time to be the final cents minted in San Francisco, so 1955-Ss were saved by the ton. Thus, an MS65 example lists for only $5.50.

If you want something unusual for a type set, consider the 1931-S (866,000 minted). In XF40, this is a $90 coin.

5. 1943 Zinc-Coated Steel Cent. Minted in 1943 to conserve copper for the war effort, these were beautiful when new, ugly when well circulated. So many were produced that they are remarkably inexpensive, with values in MS65 of either $28 (P and D) or $35 (S).

6. Lincoln Cent, Lincoln Memorial Reverse. Beginning in 1959, the Wheat Ears reverse was replaced with a view of the Lincoln Memorial by Frank Gasparro. These were minted in the familiar copper composition through 1982. After that, the composition was changed to copper-plated zinc. These can still be found in circulation, although you might want to purchase a mint-state example.

7. 1901-1912 Liberty Head Nickel. With a design by Charles E. Barber, the Liberty Head or V-nickel continued to be a workhorse coin through 1912. Except for the two mintmarked 1912 nickels, all the dates have the same $25 value in XF40, and most are just $45 in AU50.

The 1912-D nickel makes an interesting alternative to the Philadelphia issues. It's the first nickel minted in Denver, has a mintage of less than 10 million, and has a value of $125 in XF40.

8. Indian Head or Buffalo Nickel, Buffalo on Raised Mound. James Earle Fraser created one of the most beautiful U.S. coin designs. At first, the buffalo stood on a raised mound, but this was quickly changed to a design on which the denomination was recessed, and the buffalo placed on a plain. The reason for the change was a fear that the denomination would wear away quickly, and the coins would be gold-plated to fool vendors.

The 1913(P) had the largest mintage and is the least expensive for type purposes. In XF40, it lists for only $17, and an MS63 example should cost about $60. With a fraction of the mintage, the 1913-S Type 1 is an interesting alternative. In XF40, it lists for $75, and an MS63 is worth around $170.

9. Buffalo Nickel, Buffalo on the Plain. Any nickel after 1913 will do as an example of this type, and a common date such as 1937 is worth about $4 in XF40 and $30 in MS63. As an alternative, the 1931-S Buffalo has one of the lowest mintages in the series but is not terribly expensive because many were saved. It's worth $26 in XF40 and $150 in MS63.

10. Jefferson Nickel. With a design by Felix Schlag, these were minted from 1938 through 2003 with the same obverse and reverse designs except that Schlag's initials (FS) were added to the obverse in 1966. Obviously, almost any date will do for type, but I suggest the one with the lowest mintage (1950-D, 2,630,030 minted). Currently, it's worth $35 in MS65.

11. Jefferson War Nickels. With nickel a critical war metal, the Jefferson nickel's metallic composition was changed in 1942 to exclude nickel and include 35 percent silver. To mark the change, the mintmarks, including P for Philadelphia, were enlarged and placed above Monticello's dome. War Nickels were minted through 1945. Like the 1943 Lincoln cents, the War Nickels were beautiful when minted and ugly after extensive circulation.

For type, any date will do, as they're remarkably inexpensive even in MS65. For example, the 1943-D, with the lowest mintage of any War Nickel, is worth about $20 in MS65.

12. Barber Dime. Charles E. Barber's Liberty Head design served the country well through 1916, when it was replaced by the so-called Mercury dime. Large enough quantities were minted so that a coin for type won't be excessively expensive. Philadelphia examples can be bought for about $35 in XF40 or $200 in MS63. As an alternative, consider the 1915-S, with a mintage below a million. In XF40, it's a $75 coin.

13. Mercury Dime. With a design by Adolph A. Weinman, the so-called Mercury dime (actually a version of Liberty wearing a winged cap) lasted from the beginning of American involvement in WWI to the end of WWII. For type, most collectors will choose one of the 1940s years, as these are typically the least expensive. Several can be bought for around $30 in MS65. An interesting alternative is the 1931-D, with one of the series' lowest mintages. Its list price is $135 in MS63.

14. Roosevelt Silver Dime. John R. Sinnock's design featuring President Franklin Roosevelt's bust facing left was minted in 90 percent silver from 1946-1964. Many of the later dates are worth less than $10 apiece in MS65. The date with the lowest mintage, 1955(P), lists for $13 in MS65.

15. Roosevelt Clad Dime. Clad Roosevelts, minted from 1965 to date, are typically worth less than $10 apiece even in MS65. You should be able to obtain a nice example from circulation.

16. Barber Quarter. This is another coin with Barber's Liberty Head design. There are lots of dates between 1901 and 1916 that aren't outrageously expensive. A couple of dates that I like as alternatives to a high-mintage Philadelphia quarter are 1912-S and 1915-S. Both had mintages well below a million but are worth about $150 in XF40. Several late dates in the series list for less than $50 in XF40.

17. Standing Liberty Quarter, No Stars Below Eagle. This is the Type 1 version of Hermon A. MacNeil's beautiful quarter. In addition to the lack of stars below the eagle on the reverse, Liberty's breast is uncovered. This version appeared on the 1916 and on some 1917 quarters coined at all three mints (PDS). The 1917(P) is the least

expensive, with an XF40 value of

With the way the exposed dates away on these, you'll need to buy high circulated grade to ensure tha coin has a full date. If you want a state coin for your type set, the le expensive date in MS63 is the 19 D, which lists for $400. Most of examples of this date I've seen o tend to be well struck, which is n something you can say about ma Standing Liberty quarters.

18. Standing Liberty Quarter Stars Below Eagle. The first group of these quarters, called Type 2, were minted from 1917 through 1924. Many of these were weakly struck as well as having a raised date that wore away quickly. I once owned a 1920 that was obviously in mint state, but it had left the mint with no more than half a date. The least expensive for type purposes is the 1918 at $35 in XF40. Alternatives include the 1918-S at $70 or the 1920-S at $60.

19. Standing Liberty Quarter, Recessed Date. In 1925, the Mint finally got the message and recessed the date, which meant that most of the quarters between 1925 and 1930 survived circulation with their dates intact. Several coins in this group have $42.50 values in XF40, including the 1928-D, 1929-D and S, and the 1930-S. All four have mintages well south of two million pieces.

20. Washington Silver Quarter, 1932-1964. John Flanagan designed what was intended to be a one-year commemorative issue to celebrate the bicentennial of George Washington's birth. For type purposes, any date will do, and you can find many dates, even some in the 1930s, that list for $100 or less in MS65. Examples include 1935 at $80, 1936 at $100, and 1939-D at $100. For a later date with a low mintage, the 1955-D (3,162,400) lists for only $42 in MS65.

21. Washington Clad Quarter, 1965-1998. Most of the clad dates were minted in humongous quantities, which means that you can either look for one in circulation or purchase one in MS65 for less than $10.

22. Washington Clad Quarter, Bicentennial (1776-1976). The reverse was changed to a military drummer boy to commemorate the Bicentennial of the United States, and the obverse bore the dual dates, 1776-1976. Vast quantities were minted in 1975 and 1976, and you can still find these with diligent roll searching. List values in MS65 are less than $10.

1916 Mercury Dime. (Image courtesy of Heritage Auctions www.ha.com)

1965 Washington Clad Quarter. (Image courtesy of Heritage Auctions www.ha.com)

23. State Quarters (1999-2000). These are the first two years of the State Quarters program, which began in 1999 to celebrate the bicentennial of Washington's death. For type, you could select any one of the 10 different state designs or assemble a set of all 10, as each represents a different design type. You can probably find many of these still in circulation, or purchase any of them in MS65 for less than $10 apiece.

That's all for this month. I'll cover the remainder of a 20th century type set in Part 2 next month.

MarketWatch

Market Confidence Kicks Off 2022

By Richard Giedroyc

It appears 2022 may be off to a good start. The demand for bullion, collectible and rare coins continues to move forward. The confidence people have in the market can be illustrated through the upcoming auction of a Judd 1373 1874 Bickford gold $10 eagle pattern that has been off the market for 21 years. The seller would never take a chance if that seller didn't believe the bull market for rare coins is slowing.

The demand for collectible coins continues to grow, regardless of the rarity and the price of those coins. The coins may be non-circulating legal tender commemoratives fresh from the Mint, they may be bullion value impacted, or they may be circulation strike coins from the past or those now in circulation.

There is reason, however, to watch our backs. Investment market observers are increasingly in agreement that many younger investors view cyber currencies as the new gold. This observation can be successfully argued when you examine the poor performance of precious metals during 2021 in the face of rising inflation. If this potential switch from precious metals to cyber money products proves in the long run to be true, does this suggest these younger investors are bypassing such commodities as gold and silver American eagles, common but collectible late 19th and early 20th century circulation strike coins impacted by their intrinsic value, and such exonumia products as silver art bars and silver rounds? For many collectors, these market segments are their entry level points. We need to continue to innovate not only the products being offered, but how existing and innovative products are being brought to market.

Yes, the coin market is good. It can be even better.

The advertisers' index is provided as a reader service. Occasional last-minute changes may result in ads appearing on pages other than those listed here. The publisher assumes no liability for omissions or errors.

Since its inception in 1955, ***Coins*** magazine has been a hobby leader in providing collectors with important and timely information key to making wise decisions on what coins to collect and how to get them.
Get market trends, buying techniques, and historical perspectives on all aspects of coins (numismatics).
Each issue delivers in-depth analysis, up-to-the-minute valuations, answers to all of your coin questions and more!
